

UTAS DOWNLOAD OF PSYCHIATRY (DOP)

The DOP is freely accessible information about mental disorders and psychiatry, at about medical student level. It can be used as an alternative textbook, and may be of interest to a wider audience.

The DOP is copyright. Users are very welcome to print out the entire document. However, photocopies or commercial gain is not to be made without the express permission of the author.

The DOP is a work in progress. It will be continuously updated and improved, in both content and useability.

Readers are encouraged to contact the author regarding typographical or factual errors, issues of disagreement, further suggested topics, or other matters.

CONTENTS

Chapters

- 1. Introduction to psychiatry**
 - Aims and definitions**
 - Classification systems**
 - Symptoms, signs and syndromes**
 - Faking it**
 - Mental versus physical disorders**
 - Mental health and mental health problems**
 - Causes of mental disorders**
 - The treatment of mental disorders**
 - Psychiatrists and mental health teams**
 - The medical model**

- 2. Hardware**
 - Introduction**
 - Brain**
 - Neuron**
 - Synapse**
 - Further details of particular structures**
 - Hippocampus**
 - Psychiatric disorders and the hippocampus**
 - Fornix**

Papez circuit
Amygdala
Disorders and the amygdala
Thalamus
Thalamus and mental disorders
Frontal-subcortical circuits
Frontal-subcortical circuits and disorders
Cerebellum
Fight or flight response

- 3. Classification of mental disorders**
 - Aim and introduction**
 - Madness**
 - Psychotic disorders**
 - Mood disorders**
 - Non-psychotic disorders**
 - Personality disorders**
 - Organic mental disorders**
 - Substance use disorders**
 - A backward glance**

- 4. Delusions and delusional disorder**
 - Aim and definition**
 - Categories of delusions**
 - Possible differences between delusions**
 - Unknown prevalence of delusional disorder**
 - Pathophysiology of delusions**
 - Management**
 - Case history**

- 5. Hallucinations**
 - Aim and definition**
 - “Hallucinations” in healthy people**
 - Hallucinations in mental disorder**
 - Auditory**
 - Visual**
 - Tactile**
 - Somatic**
 - Gustatory**
 - Illusions**
 - Other perceptual difficulties**
 - Case history: 1, 2 & 3**
 - Overview of disorders which feature hallucinations**

- 6. Form of thought**
 - Introduction**
 - Technique**
 - Classification of thought disorder**
 - Derailment**

Flight of ideas
Incoherence
Neologism
Blocking
Perseveration and echolalia
Poverty of thought
Poverty of content
Illogicality
Form and/or content
Summary
Further material

7. Schizophrenia

Symptom clusters
Symptoms
Neurobiology of schizophrenia
Neurodevelopmental model of schizophrenia
Schizophrenia as a disconnection syndrome
Neurochemistry of schizophrenia
The genetics of schizophrenia
The causes of schizophrenia
Prognosis
Management
Case Description 1 & 2
Brief psychiatric rating scale (BPRS)

8. Sadness and depression

Introduction
Sadness
Grief
Demoralization
Depression
Major depressive episode
Major depressive disorder
Bipolar depression
Dysthymia
Four-dimensional symptom questionnaire (4DSQ)
Hamilton depression rating scale
Montgomery Asberg depression rating scale

9. Mood elevation disorders

Happiness
Introduction to pathological mood elevation
Manic episode
Hypomanic episode
Bipolar disorder
Clinical features of bipolar disorder
Neuropsychology
Neuroimaging in bipolar disorder
Pathophysiology of bipolar disorder

Genetics of bipolar disorder
Cyclothymic disorder
Young mania rating scale

10. Personality and personality disorder

Introduction
Personality
Normal versus abnormal
Personality disorder
Dimensional model and assessment method
Categorical model and assessment method
Personality disorder as a mental disorder
Diagnostic criteria
Neuroimaging in personality disorder
Genetics
Aetiology
Management
Prognosis

11. Posttraumatic stress disorder

Introduction
DSM-IV diagnostic criteria
Spectrum of mental responses to trauma
Risk and natural history
Prediction
Pathophysiology
Treatment of established PTSD
Prevention – “debriefing”
Prevention – preferred action
Initiation of active treatment
International Medical Corps guidelines

12. Substance use disorders

Introduction
Historic and useful terms
DSM-IV Substance-related disorders
Substance intoxication
Substance withdrawal
Substance abuse
Substance dependence
Substances and the brain
Personality and substance use
Genetics and substance use
Motivation to take substances
Screening test (Two-Item)
Neuroimaging and substance use
Alcohol
Opiates
Stimulants
Ecstasy (MDMA)

Cannabis (THC)
Hallucinogens (LSD)
Alcohol withdrawal protocols

13. Obsessive-compulsive disorder

Introduction
Epidemiology
Clinical features
 Obsessions
 Compulsions
Diagnostic criteria: Obsessive-compulsive disorder (DSM-IV)
Symptom-based sub-typing of OCD
Comorbidity
Genetics
Brain structures and neuroimaging
Immune factors
Current theories
Psychological therapy
Pharmacological therapy
Other treatments
Hoarding
Speculation on drinking urine
Case history 1, 2 & 3
Yale-Brown obsessive-compulsive scale (YBOCS)
Diagnostic criteria: Obsessive-Compulsive Personality Disorder

14. Eating disorders

Asceticism
Introduction to eating disorders
Anorexia nervosa
 DSM-IV diagnostic criteria
 Aetiology
 The clinical picture
 Outcome
 Treatment
Bulimia nervosa
 DSM-IV diagnostic criteria
 Aetiology
 The clinical picture
 Outcome
 Treatment

15. Antipsychotic drugs

The difficulties of classification
Introduction
The typical antipsychotics
Side-effects of the typical antipsychotics
The atypical antipsychotics
Side-effects of the atypical antipsychotics
Individual atypical antipsychotics

Clozapine
Risperidone
Olanzapine
Quetiapine
Amisulpride
Aripiprazole
Acute and long-term antipsychotic use
Aide-memoire

16. Antidepressant drugs

Introduction
Side-effects of antidepressants
Monamine oxidase inhibitors (MAOIs)
Tricyclic antidepressants (TCAs)
Selective serotonin reuptake inhibitors (SSRIs)
Dual action antidepressants
Selective noradrenergic reuptake inhibitors (NARIs)
Augmentation of antidepressants
Bipolar depression
Medication or/and talk?
The future

17. Antianxiety and hypnotic drugs

Introduction
Benzodiazepines
The complicated debate
Psychiatric uses
Side-effects
Toxicity
Preliminary work-up
Dose and monitoring
Example drugs
Buspirone
Beta-adrenergic antagonists
Selective serotonin reuptake inhibitors
Psychotherapy

18. Mood stabilizers

Introduction
Lithium
Psychiatric uses
Side-effects
Toxicity
Preliminary work-up
Dose and monitoring
Carbamazepine
Psychiatric uses
Side-effects
Toxicity
Preliminary work-up

- Dose and monitoring**
- Sodium valproate**
 - Psychiatric uses**
 - Side-effects**
 - Toxicity**
 - Drug interactions**
 - Preliminary work-up**
 - Dose and monitoring**
- Lamotrigine**
- Atypical antipsychotics as mood stabilizers**
 - Olanzapine**
 - Aripiprazole**
 - Risperidone, quetiapine and ziprasidone**

19. Fear and anxiety

- Introduction**
- DSM-IV Anxiety disorders**
- Generalized anxiety disorder**
 - DSM-IV Criteria**
 - Epidemiology**
 - Comorbidity**
 - Theoretical aetiological models**
 - Genetic factors**
 - Neurobiological mechanisms**
 - Psychosocial mechanisms**
 - Prognosis**
 - Treatment**
- Panic attack**
- Agoraphobia**
- Panic +/- Agoraphobia**
- Panic disorder and agoraphobia**
 - Genetics**
 - Cannabis**
 - Neurotransmitters**
 - Prognosis**
 - Treatment**
- Social phobia**
- Specific phobia**
- Blood/injection phobia**
- Hamilton rating scale for anxiety (HAM-A/HRSA)**

20. Senescence and Dementia

- Senescence/Aging**
- Dementia**
 - Treatable dementia**
 - Untreatable dementia**
- Alzheimer's disease (AD)**
 - Investigations**
 - Pathology**
 - Genetics**

Treatment

Vascular dementia (VAD)
Dementia with Lewy Bodies (DLB)
Frontotemporal dementia (FTD)
Initial cognitive testing
 Abbreviated mental test score
 Mini mental state examination

21. Delirium

Introduction
Delirium due to general medical condition (DSM-IV)
Additional features
Sub-types
Confusion assessment method (CAM)
Other delirium scales
Testing attention
Predisposing and precipitating factors
Multifactorial aetiology and management
Pathophysiology
Differential diagnosis
Delirium and dementia
Prevention

22. Somatization

Introduction
Somatoform disorders (DSM-IV)
Somatization
Somatization disorder
Conversion disorder
Hypochondriasis
Pain disorder
Body dysmorphic disorder
Conceptual underpinning
 Attribution theory
 Medical anthropology
 Abnormal illness behaviour
 Medicalization
 Psychodynamic model
 Biopsychosocial model
Four-dimensional symptom questionnaire (4DSQ)
Synthesis and summary
Management recommendations
Appendix – DSM-IV diagnostic criteria

23. Factitious disorder and malingering

Introduction
Factitious disorder (DSM-IV)
Malingering (DSM-IV)
15 Item memory test
Comparing somatoform and factitious disorders, and malingering

Attitude to people with medically unexplained physical symptoms

24. Child Psychiatry

Introduction

Normal development

Circle of Security Project

DSM-IV disorders usually first diagnosed in childhood

Prevalence of childhood psychiatric disorders

Environmental factors

Genetic factors

Separation anxiety disorder

Failure to thrive (non-organic)

Elimination disorders

Attention deficit/hyperactivity disorder (ADHD)

Conduct disorder

Pervasive developmental disorders

Autism

Asperger's disorder

Other psychiatric disorders

25. Forensic psychiatry

Introduction

Fitness to plead

Criminal responsibility

Insanity defence

Diminished responsibility

Intoxication defence

Automatism

The future

Mental disorder and violence

Risk management

Case report 1 & 2

26. Higher cortical functions

Introduction

Memory

Loss of memory/amnesia

Orientation

Attention (concentration)

Other HCFs

Language

Skilled movement (and apraxia)

Recognition of stimuli (and agnosia)

27. Frontal lobes – beside testing

Introduction

Functional regions of the frontal lobes

Primary motor cortex

Premotor cortex

Frontal eye fields

Dorsolateral prefrontal cortex (DLPFC)
Orbital and basal area
Supplementary motor area and cingulate cortex
Frontal release reflexes
 Grasp
 Sucking (pout, snout, rooting)
 Palmar-mental
 Glabellar tap

28. Electroconvulsive therapy (ECT)

Introduction
History of ECT
Improvements in technique
Conditions treated
The procedure
Electrode placement
Dose determination
Death and ECT
Permanent brain damage and ECT
Memory and ECT
Case report 1, 2 & 3

29. Transcranial magnetic stimulation (TMS)

Introduction
Basic principles
 Electromagnetism
 Physiology
TMS apparatus
Stimulus intensity
Slow and fast TMS
Side effects
Contraindications to TMS
Parameters
Conditions treated
 Depression
 Auditory hallucinations
 Other conditions
The future

30. Tests: Psychiatric, neurological, psychological

Introduction
Psychiatric tests
Psychological tests
 Clock face
 Draw a bicycle
 Trail making test
 Rey complex figure
 Controlled word association test (CWAT)
 The set test
 Digit span

Neurological tests
Neurological soft signs – Heidelberg manual

31. Suicide: a broad view

A word of caution
Orthodox psychiatric view
From possession to psychiatry
Acute and chronic risk
Distress
The sociological model
Prediction and prevention
The benefit of hospital admission
The impact of suicide on others

32. Medicalization/psychiatricization of suffering

Introduction
The problem of definitions
Medicalization/psychiatricization of daily life
Disorders of interest
Depression (Major depressive disorder)
Posttraumatic stress disorder (PTSD)
Suicide
Conclusion
An exercise for the very keen student

33. Theory of mind and psychopathology

Introduction
Evolution
Ontogeny
Anatomy and physiology
ToM in clinical disorders
Developmental disorders
Personality disorder
Delusional disorder
Schizophrenia
Other disorders
ToM tests
Theory of Mind Picture Stories Task
