Greenhouse economics: the Australian Government mobilises the numbers in the lead up to Kyoto.

Honours Thesis

By

RONLYN DUNCAN

Submitted in partial fulfilment of the requirements of a B.A. (Honours) degree with the School of Science and Technology Studies, Faculty of Arts & Social Sciences, University of New South Wales, Sydney.

November 1997.
# TABLE OF CONTENTS

INTRODUCTION ...............................................................................................................4

CHAPTER ONE ..................................................................................................................9

*Why is the Australian government refusing to adopt legally binding reduction targets? A survey of its perspective as the world's largest coal exporter and the most to lose from an acceptance of climate change as a serious environmental threat* .......9

CHAPTER TWO ..............................................................................................................19

*The existence of uncertainty in regulatory science debates means that the 'interpretative gap' is bridged by domains usually thought to be external to science.* 19

CHAPTER 3 ..................................................................................................................30

*Quantification is a powerful style of rhetoric, but is it also a misplacement of trust?* 30

CHAPTER FOUR ..........................................................................................................38

*Despite economic models embodying mathematical language and notions of objectivity and authority, their rhetorical value is in their 'interpretative flexibility'*. 38

CHAPTER FIVE ..........................................................................................................45

*The 'contextualisation' of MEGABARE and the proliferation of informal rules to create a useful rhetorical device in support of the Australian government's position in climate change negotiations* .................................................................45
CHAPTER SIX.................................................................62
The mobilisation of MEGABARE and its role in overshadowing the 'environmental reality' of climate change with an 'economic reality' ..................................................62

CHAPTER 7 ................................................................................................................77
Climate change might be happening elsewhere in the world, but it is not happening in Australia..................................................................................................................77

CONCLUSIONS..........................................................................................................97
