

UNIVERSITY OF TASMANIA

STRUCTURE AND PETROLOGY

OF THE

RAGLAN RANGE

BY

DENNIS GEE

THESES SUBMITTED FOR B.Sc. (HONS.) DEGREE, 14th FEB., 1962.

CONTENTS

	<u>PAGE</u>
ABSTRACT	I
INTRODUCTION	2
PHYSIOGRAPHY	4
GEOLOGICAL SETTING	6
STRATIGRAPHY	7
PALAEOZOIC	
PRECAMBRIAN	
Mary Group	
Franklin Group	
LAMPROPHYRE DYKES	16
MINERALOGY	23
PETROGRAPHY	27
MARY GROUP	
Phyllite	
Quart-muscovite schist	
Quartzite	
FRANKLIN GROUP	
Governor River Phyllite	
Pelitic rocks	
Psammitic rocks	
"Fincham" Quartzite	
Fine grained schists and quartzite	
Amphibolite and related schists	
Knotted amphibole schist	
METAMORPHISM	48
Chemical Analyses	
Metamorphic Facies	
Origin of Albite Porphyroblasts	
Petrogenesis of the Amphibolites	
MESOSCOPIC FABRIC	54
PRECAMBRIAN STRUCTURES	
Surfaces	

Linear Structures	
Minor Folds	
Boudinage	
Mesoscopic Symmetry	
LATER STRUCTURES	
Joints	
Joint Drags	
Minor Folds	
Small Faults	
MACROSCOPIC STRUCTURE	67
Analysis of Foliations and Lineations	
Geometry of Lineation Pattern	
Tabberabberan Folding	
Fault Complex	
Tectonic Profile	
FAULTS	80
MICROSCOPIC FABRIC	83
Surfaces in Mary Group	
Surfaces in Governor River Phyllite	
Surfaces in Upper Franklin Group	
Petrofabric Analysis of a Fold	
Petrofabric Analysis of a Pseudo- Ripplemark	
Fabric of Mary and "Fincham" Quartzite	
Conclusions	
RELATION BETWEEN METAMORPHISM AND STRUCTURE	105
Textural types of Minerals	
Chronological Sequence of Mineral Crystallisation	
Metamorphism of the S1 Phase	
Nature of the Mary Group - Governor River Phyllite Contact	
Metamorphism of the S2 phase	
Tectonics of the Area
