Effects of Uterine Removal on the Growth of the Fetus in the Remaining Uterine Horn of Mice

Herbert Sipahutar

A thesis submitted to the Department of Zoology, University of Tasmania, in partial fulfilment of the requirements for the degree of Master of Science

May 1997
Declaration and Statement

I hereby declare that this thesis contains no material which has been accepted for the award of any degree or diploma in any university and that, to the best of my knowledge, this thesis contains no copy of previously published material except where due reference is made in the text.

Summary

Acknowledgments

1. General Introduction
   1.1. General Review
      1.1.1. Reproductive Biology of the Mouse
      1.1.2. Utero-ovarian Relationships
      1.1.3. Progesterone and Pregnancy
      1.1.4. Prenatal Growth
      1.1.5. The Growth of Neonate
      1.1.6. Normal Histology of the Ovary and Uterus
   1.2. Study Objectives

2. General Methods
   2.1. The Animals
      2.1.1. Breeding and Handling
      2.1.2. Mating and Judgement of Gestation
      2.1.3. Room Environment
   2.2. Experiment Design
   2.3. Surgery
   2.4. Autopsy
   2.5. Statistical Analysis

3. Effects on the Length of Gestation and Prenatal Growth
   3.1. Introduction
   3.1.1. Litter Size and Length of Gestation
   3.1.2. Utero-ovarian Relationship and Length of Gestation
   3.1.3. Objectives
   3.2. Methods

Acknowledgments

I would like to express my sincere gratitude to my patient supervisor Dr. R.W. Rose, who with a combination of encouragement, criticism, guidance and assistance made this project possible and made the times of frustration more tolerable.

My special thanks also go to the academic and technical staff in the Zoology Department, University of Tasmania. In particular: Associate Professor R.W.G. White for his excellent support which made things run more smoothly, Dr. Sue Jones for instructing me in progesterone analysis (RIA) and affording interesting discussions, Dr Leon Barnuta and Dr. Roy Swain for their excellent advice and discussions on statistical analysis, Mr. Jerry Lim for his helpful advice concerning photography, Mr Barry Rumbold for his help in the purchasing of materials and Messrs Alan Dumphy and Wayne Kelly for their efficient technical support during the course of this project. Very special thanks also go to Mr William Elvey for his friendship and help in final editing of this thesis.

I am also grateful to those at the International Student Office, University of Tasmania, Hobart who gave their assistance, especially to Mr C. Street for his invaluable help at the beginning of the study, Ms J. Lansdowne for her invaluable advice during the course of study, and Ms L. Oxley and Mrs M. Eldridge for their excellent help in editing this thesis.

I wish to extend my thanks to the Directorate General Higher Education, Department of Education and Culture of the Republic of Indonesia for having awarded me a scholarship to undertake this study at the University of Tasmania. Also my thank to IKIP Medan, especially to Prof. Drs. Darmono, M Ed (Rector) and Prof Djanius Djamin, SH., M Si. (Vice Rector-I) for their assistance with the extra funds needed to finish this work.

I also thank my mother for her unfailing encouragement and support. Finally, but very significantly. I wish to give my warmest thanks to my wife, Linda, for her patience and encouragement during my two years' work in Hobart and for the sacrifice of all her weekends and for her devoted help especially during the final preparation of this thesis.
