

**Investigation into the microbiological causes of epizootics of
Pacific oyster larvae (*Crassostrea gigas*) in commercial
production**

by Christopher Chapman
B. Ag. Sc (Hons) University of Tasmania

Submitted in fulfilment of the requirements for the degree of Doctor of Philosophy

Declaration

This thesis contains no material that has been accepted for the award of any other degree or diploma in any tertiary institution. To the best of my knowledge this thesis does not contain material written or published by another person, except where due reference is made.

Acknowledgements

To my supervisory team, Mark Tamplin, John Bowman, Shane Powell and Michel Bermudes I would like to thank you all. To Mark for his guidance and for keeping me true to my plan; to John (the walking Bergey's manual) for his fresh ideas and for his encouragement; to Shane, with whom I worked closely on all aspects of this project, thanks especially for helping me survive the laboratory and for being critical on drafts of this thesis; and to Michel for providing the industry perspective.

I would like to give particular thanks to the Shellfish Culture team to whom I promised more than I was able to deliver. They made me feel part of the team and gave me free run of their hatchery. Thanks to Tom Spykers and Lee Wilson whose time-tested observations informed the direction of this study. Thanks to Scott Parkinson for initiating this study and providing support throughout.

I would like to thank a number of external people for their help and their advice. Thanks to Tom Lewis of Rural Development Services, for pragmatic and strategic advice; to Wayne O'Connor and Stephen O'Connor of NSW fisheries, for introducing me to the industry and for strategic advice in the planning phase of the project; to Graeme Knowles (DPIPWE) for taking an interest and for his collaborative efforts; and to Guy Abell of CSIRO, for technical advice.

To members of the university staff who provided assistance I acknowledge their efforts. In particular thanks to Adam Smolenski for trouble shooting problems in the molecular lab; and to David Ratowski for sharing his considerable knowledge and experience in statistical analysis of unbalanced datasets.

To Karen Watson - with whom I shared much of this journey from beginning to end - for her support and patience.

Finally, to the millions of larvae that died in the making of this thesis, may they be reincarnated as something bigger with sharp teeth, much much higher in the food chain.

Table of contents

Abbreviations	1
Abstract	2
Introduction	4
1 Chapter 1: Literature review.....	8
1.1 Introduction	8
1.2 Normal development of Oyster larvae	9
1.3 Causes of larvae mortality	10
1.4 Larvae immune response	17
1.5 Microbiological aspects of oyster hatcheries	20
2 Microbial ecology in a commercial oyster hatchery tank	30
2.1 Abstract	30
2.2 Introduction	31
2.3 Methodology	32
2.3.1 Monitoring program design	32
2.3.2 Hatchery production systems	33
2.3.3 Analytical procedures	34
2.4 Results	41
2.4.1 Bacterial communities of the larvae tank	41
2.4.2 Relationships among microbial niches of the larvae tank	42
2.4.3 Tank type and associated microbial communities	44
2.4.4 Temporal variability in microbial communities of larvae and WC.....	45
2.5 Discussion	45
2.5.1 Bacterial communities of the larvae tank	45

2.5.2	Relationships among microbial niches of the larvae tank.....	47
2.5.3	Temporal variability in microbial communities of larvae and WC.....	52
2.6	Conclusion.....	53
3	Microbial communities associated with epizootics in a commercial oyster hatchery...	60
3.1	Abstract	60
3.2	Introduction	61
3.3	Methodology	63
3.3.1	Monitoring program design.....	63
3.3.2	Analytical procedures	63
3.4	Results	66
3.4.1	Observation of disease symptoms	66
3.4.2	Microbial communities and disease incidence	67
3.4.3	Vibrio abundance and disease incidence.....	68
3.5	Discussion	69
3.6	Conclusion.....	73
4	Oyster larvae stress and susceptibility to bacterial disease	77
4.1	Abstract	77
4.2	Introduction	77
4.2.1	Interaction between chemical stress and infectious disease	77
4.2.2	Chemical stressors in the hatchery environment.....	79
4.2.3	Measurement of chemically induced stress in oyster larvae	81
4.2.4	Research objectives	84
4.3	Methodology	85
4.3.1	Copper sulphate exposure followed by bacterial challenge	85
4.3.2	Copper sulphate exposure and larvae behaviour	86

4.4	Results	87
4.4.1	Copper sulphate exposure followed by bacterial challenge	87
4.4.2	Copper sulphate exposure and larvae behaviour	88
4.5	Discussion	89
4.6	Conclusion.....	93
5	Synopsis.....	97
6	Appendix	101
7	References	115
