

CHARACTERISTIC PLANTS OF KETTERING AND ITS
IMMEDIATE VICINITY.

[By R. M. JOHNSTON, F.S.S.]

Read August 11th, 1903.

The following is a classified list of plants collected within the limits of the township of Kettering in the month of November, 1901. The greater part of the shrubs and herbs were in flower, and the collection, although far from complete, may be regarded as specially representing the characteristic flora of this beautiful seaside locality.

It is hoped that the publication of this list of the characteristic plants of Kettering will induce lovers of botany elsewhere to prepare similar lists, and thus extend our knowledge of the distribution of the interesting flora of this island.
