Case: Walter. v.

The case appears very vague. There is no doubt of the actual soreness of the liver, but whether it is internal or external or peritoneal is not certain. Does the stomach symphysis with the heart or stomach, or are any of the parts implicated? Why does the pain return so often in spite of every precaution as since last bleed, every third day, except last Saturday night? Many small mists of either fluid or coming, white, red, or a bit of bile, or an apple at times, been very sparingly. Why do the pain change its position? Why are fevers only felt in the abdomen, though it is in the head, complaints? Do the symptoms or signs of the disease indicate a structure of Riedel, or a stomach, liver, or kidneys?}

Why, was of constipation, severe at first, but gave up all cause of alarm. To what? This friend's case.

Why does pain change its position? Sometimes affect the back either near the sacrum or extends up to the dorsal vertebrae. Sometimes around the left lumbar. I then consider it to be a structure of Riedel.

He has been ill of a similar complaint, 12 yrs. & 6 years ago. Since, the sister of Pits, at three times. They again after 12 yrs. 29/6/34.

Since last exposure to the fresh air, in the abdomen, breast, and all parts of the abdomen, a pain in the right side, nothing to be made, brought off. The pain frequent, was severe at first, but gave up all cause of alarm.
The complaint now appears almost gone having lasted 7 weeks. The appetite is 
good, but inconvenience still 
occurring by the eating some 
smell of fish. I allow 
Potatoes at Dinner.

Bows in same state. Vomiting 
of much same appearance

of Inst 11h after 12h.
On 30th April was called aboard. Labour. On the evening of 30th labour commenced. 1st labour very strong, membranes were prematurely ruptured. She complained all the time of intense pain of the right side. She was made more comfortable by getting her to the sofa, and water given. It became evident that before my arrival her bowels had not opened. As she complained of intense pain in the right side, and the membranes were ruptured, I ordered her to lie down on a sofa, and place an enema of warm salt water, and externally, vinegar. She made very little progress. I removed her to the bed, and ordered her to lie on her left side, and applied a bag of warm saline. She continued to be in great pain, and her bowels did not open for two days. On the 2nd day, she was taken to the hospital, and her labour continued. The membranes were ruptured, and the child was expelled. The labour was very easy, and the child was born in the usual manner. The obstetricians were present, and assisted in the delivery. The child was a girl, and weighed 7 pounds. She was in good health, and the mother did not suffer any inconvenience.
short and lingering until six or eight next morning when she came on very little. She had advanced slowly to the extent of some 300 yards. On getting out of bed she was very weak and very sick. The only thing she could do was to sit up and at first was quite supported by her back. She was very weak and required to be carried if she was to be moved.

The bowels had been allowed to pass as much as possible and herself being also very sick of fevers and such as the cold at noon was no sign of fever remaining & she was uneasy with constrictions from head as well as severe for some 63. of 1. & 30-15. 6. 3 of a.m. This caused sleep. It was 30. interrupted by any for either of my relations until 1 a.m. the next day when a few p.m. came on the effect of this it was very

The warmest and clearest sky. The cold was very slight and continued.

The prevalent wind were east.

The sky was clear and very mild with no indication of any change.

The wind was a little stiff but fair at first.
move the bowels with pain, no swelling but the very back of the thigh and lower back of C. & the foot.

On the 3 day last tracts became more convulsive, and she felt a pain in the back, and complained of pressure on the pubis quite I had before. Her thirst, tongue, & breath were very dry and coarse. Her face was flushed very little and no discharge from the nostrils, the urine, 3 grains, involuntary, which did not have the case for the night. I first mixed 1 scruple of colocynth & 5 grains of opium & ordered the bowels to follow very much. She was now in a helpless state could not be moved to get out of bed, & the uterine tracts were opened in consequence of pain in the lower part of the back and she was in an other posture than on last. Feb. 10th I gave her pill of opium & calomel with 3 grains of calomel every 2 hours, the remainder easy till early next morning. She passed 2 or 3 bowels

returned with fruit & tried to give bread & did not succeed. No loss of blood had been allowed by some. At 12 o'clock 3 grn. of calomel & a pill of opium & calomel were given. A glass of wine was given in the evening, but it was given without vinegar, & she had not a bowel. The pain in the leg could not be removed, lasted 12 hours at a time for nearly a fortnight. After a week fever came on & continued for 7 days, the patient said it was now violent, & she had no pain. The pain in her abdomen was not colored & not much in proportion of the swelling.

Calden Watson came from his quartes or other narration a son of ye Sls. from 24 Oct 40. sick with Bismuth. Tcrd in one of yngsters, with affect. with effect.

The symptoms however abated after ye Bismuth & the blood was bloody & heavy.

And a warm bath was also given every night. It gave him ease for immediately on entering the bath it for some time after as occasioned extreme quickness in rising up to come out of it. He even rising up in bed caused approaching syncope. The ailes of pain again on the disease increased to a slight degree at the joint of ye great toe of ye right foot. was observed but went away in two or three days. However as the symptoms became

relieved a week after ye nothing was discontinued. The foot came in the great toe of left foot it was one night extremely painful. But soon disappeared.

The next symptom that appeared was extreme difficulty of expiration. He was not able to go out.

The next was death. The next was death, he was never cured. He took Bismuth with soda for 6 days. Then讲师: Y. May 8th.

Notes. The 1st symptom of ye Inflammatory state of parts being subdued was coldness in double after discharging cold water. Then the 1st application of using stimulants. Hint. every day 29, 30, 31, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16. 17, 18, 19, 20.

1844. 26th December.

Miss Spurlock presented me with a small claret, a bottle of port and a bottle of sherry.

I hope that all is well with you. I am in full health and strength. Three or four weeks ago I was taken ill with a severe attack of dysentery. I am now fully recovered and expect nothing to stand in the way of my health. I am, therefore, able to write this letter to you.

With sentiments of friendship and regard,

Yours sincerely,

[Signature]
and movable, the vein is red but not so intense a red as you are they to be 

suffered. The ulcer on the 

body of the penis extends 3/4 round it on the right side 

this side this side of the penis, on the left side there is 

a third red margin but no such appearance at the 

left side. The ulcer is therefore in a steady 

state that ulcers at the 

root of the penis seems 

contracting but from the 

difficulty of keeping any 

application to it it is covered 

with the meat as you are 

mentioned before except in the 
centre where it appears white 

with a few red irritable dots in it 

so these are also on the 

other one.

The discharge has disappeared 

since the mouth became 

so sore.

19 April. The ulcer to 

be on the body of the penis 

appears to be healing in 
some parts in others it 

is rather an ulcerative 

appearance the margin 

by being another cap. not 

the thought for the dressing 

yesterday is not removed 

with a cloth round some parts 

is red but the penis is not 

inflamed beyond the margin 

of the ulcer slightly touches the 

ulcer with a solution of 

Nit Acid and then coul 

d it with a piece of lint as 

much pain from each dry in 

apply a poultice tonight. 

The ulcer at the root of 

the penis is worse than 

yesterday sore with a
&gut — the cost of the
in which
the face
the
the
vice or
the

Jaffatum since last night
the small ulcer much
improved in appearance and
lost most of the whitish crust
the edges left the depends dry
the large ulcer had
a small ulcer applied this
day has removed part of the
black scabs but it has not
such a healing appearance
as yesterday the edges being
recovered in most places
that are free from the ulcer.
Both ulcers dried with
the solution of N 100 mps
but no signs of color immediately
both smaller ulcer almost
22nd: Dark operated once
yesterday but in the night
the dressing became detached
at first but no so severe
mouth better. The large ulcer
taking up the ulcerative
process all the margin red

deep fourth worst in those
parts that were covered with
scar yesterday the scar being
now removed its whole margin
was cauterized by sty. Hill
the other ulcers cauterized in one or
two places but neither seem
to have healed any since
yesterday apply poultice again
perhaps to the large one.

23rd: The ulcers have been cauterized
on 23rd and now seem to have
not almost entirely the white
though with 1/5 their surfaces
the large ulcer were covered & healing on both
side by approximation about
1 inch being united the edges
not to each other and both
ulcers freed in four days
now people 3rd. 1st

Bullock really digested though
continues very free great disease
of tobacco Bowels not pleased
since 23 have some valley of
the rain began
After working a day in the water making bricks the following symptoms appeared. The patient was taken very unwell at the same time above two small blisters on the foreskin which increased and accompanied with severe inflammation so that in three days the condition arrived at its present state with Dec 12th 1834. There is a papishumous fluid immediately behind the glands and in the raphe of these an ulcer extends more than two thirds of the circumference of the prepuce. The whole prepuce is much swollen and of a livid color but the ulcer is nearly considerable pain & the discharge a bloody appearance. It caused a glutinous discharge which continued to its edge but its broad base at the broad part of the penis. At the root of the penis on the right side there is also a ulcer of the size of a shilling partly on the skin of the prepuce. On that of the penis covered with a similar discharge to the other ulcer. In each groin there is a bubo, the right groin is about the size of a full egg movable but the left bubo is considerably larger than the right & feels as if two glands were involved. The skin & cellular substance are also inflamed & adhering to it.
mumblers of humanity. Indeed, a man is a man of all
and every kind of noble abilities, and has a right to take
his place among men. Among other things, he must
be able to read and write, to think and reason, to
understand and feel. Men are all created equal, and
have a natural right to be free and independent.

It is easy to see that men have a natural right to
freedom and independence. They were created equal
and have a right to be free and independent. Men
are all created equal, and have a natural right to
freedom and independence. They were created equal
and have a right to be free and independent.

The great fact is that men have a natural right to
freedom and independence. They were created equal
and have a right to be free and independent. Men
are all created equal, and have a natural right to
freedom and independence. They were created equal
and have a right to be free and independent.

The great fact is that men have a natural right to
freedom and independence. They were created equal
and have a right to be free and independent. Men
are all created equal, and have a natural right to
freedom and independence. They were created equal
and have a right to be free and independent.

The great fact is that men have a natural right to
freedom and independence. They were created equal
and have a right to be free and independent. Men
