

Melbourne
bot garden
5/8/91.

My best thanks are
due to you, dear Dr
Stroy, for the kind
sending of dried plants,
which arrived here
last week. I shall value
like the collection and
gratefully remember the
generous and venerable
donor.

The supposed *Struborgia*
is *Diplarrhena Moraea*
(Labill.)

The *Myriophyllum*
with the narrow
long floral leaves
= *M. variifolium* of
Hooker. The other
species is *Myriophyllum*
latifolium (Jacquin)
dichand) But I am
opate you will find
in blackish marble
near the coast the
usually devant *My-*
riophyllum Muller.
(Vander) It is has
wood like solitary
rather large bracts
on floral scales?

Trusting that you are
in enjoyment of good
health I remain your
very respectful
servant
J. D. von Mueller

I will send you some
plants to Wreath.

Oranella 2

H. 10^{mo}

on Rock

Hills

Caladenia Patersonii B.

Sturnbergia
common on
good soil

Dykascheus
Moraea
