

C7/94

McLaurin  
24/7/94.

Allow me to ask you,  
dear Dr Story, whether  
you can furnish me  
in a letter with a few  
good specimens having  
anthers and ripe fruit  
of the enclosed *Althemia*,  
described as *Zinnia*  
*chellia palustris* - or it  
seems in the Flora  
Faosmarica. The piece  
of the plant enclosed  
is from New Australia,  
but a small fragment  
of apparently the same  
species adhered to some other  
matoplant sent by you.

The plant is most  
likely common in  
ditches near you  
I am now finally work-  
ing on *Sajadeae* for  
the Flora (the 7<sup>th</sup> volume).  
There ought to be yet  
other *Lemnae* near  
you than *L. minor*  
and *L. trioculata*.

Let me hope you are  
well. That is the sin-  
cere wish of your re-  
gardful friend  
Gardner Mueller

Speierker  
Zammischellia  
Palustris  
is the same  
at Grassdale
