

20/1/69

Dear Mr
Foy, I return the
list of the names
of the plants you
so very kindly sent
You will find them
all named according
to our latest obser-
vations.

The beautiful supply
of authentic Jac-
quaria and of the
Lichyom Gypso-
dioris please me
very much.

You have again shown
new localities for
rare plants. Fresh
among the swamp
plants you will
find doubtless yet
many hitherto over-
looked. Even the
smallest and most
insignificant of them
will be welcome.

Trusting you will
continue your most
valuable communica-
tions I remain your
regardful

Frederon Muller

The little ~~Geranium~~
creeping plant named
Geranium N. 4
seems to me

Geranium phycin
However flowers
& fruits are wanting!

Leucopogon callinus Br.
occurs in your collection
without number. It
is not *L. ericoides*

I would advise to
adopt simply a current
number for all your
plants. You will find
that such numbers will
aid us both with the
greatest facility

Geranium N. 4
is Veronica Hebea Hoffm. var. v. v. v.
Leucopogon Collinsus
