

Nails are considered to give nine hundred and twenty to the thousand and 920 of these Shingle Nails weigh $2\frac{3}{4}$ lbs. The Ironmongers are never very particular I counted a gross of Screws this week, and it was more than a twelfth part. Now if a thousand of the Shingle nails be counted, and they weigh three pounds, it will follow that if they be at $2\frac{3}{4}$ lbs per lb. that they are about one twelfth part, which is near enough, or rather is considered so by the Ironmongers. 'Tis commonly said that nothing is full tale. I have found Jacks, one hundred and sixty that of the m.

The gold green paint in Case no 4. is a good oil green of a light color and I thought the best way to enquire if it would suit in your fine climate would be to send a sample out there is but 7 lb of oil in the keg which is thick it goes best in that state, when sent a long voyage, but there is a tin can account carrying it containing the raw linseed oil & Turps to mix it. This is the only oil green of a light color which will stand.

The 6 Days of Watch Springs are sent as a sample. Given R. S. Cotton and self think that it may not be impossible for us to send out a few to supply the watch menders in Hobart Town. If there is a demand of watch springs, we would execute the order.

Do the best that can be done with these, as I suppose that it would be possible to change them away for some article, either for yourselves or acquaintance, even if they should be well stocked with springs. These are good ones of the most useful sizes, and if ^{they} are wanted we would undertake to supply them. Thomas also thinks of sending out a few watches. He bottles water for Rowling, Meats, etc. in London, &c. may he do so? if watches are sent at about what price? I perhaps seven watches

Seeds Altho' Grass seeds are gathered late in Summer
 or early in Autumn yet they and any or all other seed
 are not brought into the Market till late in the
 Winter. The reason of the delay is, that the seeds are
 put away dry, waiting untill the frost sets in so
 hard as to prevent the Gardeners men from working
 out of doors: as the last was a very open winter the
 new seed came late to Market, so that I could
 not send new in the Survey. also W. Peacock's mails
 were not up in time to go by her. I have waited
 for the Mails, — had they been here I should have sent
 either by the Cecilia, or Mary Ann: and am very sorry for
 the delay as I should think you would like to have them
 (the glass seeds) in time to sow in Autumn, which I
 expect might have been the case in the Survey;
 as it is, if you conclude to sow in Spring, I hope
 they will arrive in time: if it be your intention
 to lay down much ground in Meadow, will it not
 be proper to have this quantity sent out every
 Spring for a little time to come? This remark
 will also apply I should expect to your clothing
 and some other supplies, such as for men &c.
 which would be wanted half yearly: I think, it possible to find
 a better market than Steam, than in the winter.
 N. B. In England they prefer sowing Grass seeds with the
 Spring Cart. The rain in Winter after rolling the Grass seed
 sown in the Autumn.
